

Time Brokers, is a service that is a way of using time as currency for transactions rather than money. You share and trade time with a community. People will be able to use it within their community to be able to be a part of it. The people of a community can communicate with each other while helping each other out. It's a better way for people to know who to rely on since it's a community based service. It's a community exchange in time meaning that you don't just trade time for time, you give your time to other people. Our revenue model will be based on advertisements from major corporations that will also help people, like if someone wants to see how we get our workers (For example: Home Depot, Lowes, Safeway, Triple A, etc).

To start up you will be asked some questions to help you identify what your skills you have to offer and what some of your needs may be. These questions would be asked only because we are a safe based service.

1. Email address
2. Full Name
3. Offered Services
4. About You

We operate on a community system of trust, honesty and dependability, an integral part of time banking. Every hour or minute that you do your service for someone else, you earn that time, (Time given, time earned policy).
