

The Product Data Sheet:

The way that V Gear will work is the various different pieces (chest piece, goggles, bracelet and necklace) will work together to create a world of gaming in front of the player's eyes. The chest piece will allow the gamer to control their character with their own body giving the sensation that they are the character in the game. The goggles will work together with the chest piece to give a visual of the game that the gamer is playing. The bracelet contains a hologram projector that will work as a visual too as well for the player to be able to see the weapon if any that they are using while playing a game. The necklace will only be used for a second player that does not have a chest piece. This necklace will work as a sensor to allow the second player to know when they have been damage during a game by giving a vibrating sensation. The system will be solar powered with the option of outlet charging for extra battery life. Along with the optional outlet charging A GPS will be part of the vest and the bracelets in which the gamer will be able keep track of the other team mates throughout the game. The GPS will also work to set the boundary lines in which the game will be played letting the gamers know when they are out of boundary. The GPS is safety feature that will allow for parents to keep track of their children as they play outside. V Gear will consist of various games from which the customer will be able to choose from. The games will be downloaded through Real Life Gaming's online store, in which they will have the option to purchase a game or will be able to try the game before purchasing it at a low cost.

While the gamer is wearing V Gear he/she will be allowed to take the system outside or around the house where they are free to run around and play as they please without restrictions. While using our product with a group or another player the gamers will have face to face interaction with one another, improving communication skills that have been disappearing due to our competitors who don't make in-person interaction an important factor of their product.

When packaging V Gear Real Life Gaming will packaged V Gear in a box with a plastic see through front where the customer can see what they are buying. In this package the vest system will be included along with 2 goggles, a bracelet, and a necklace, this type of bundle will allow for a 2 player game. In a separate package that will look similar to the original box a set that contains a pair of goggles, a bracelet, and necklace will be sold separately for any additional players.
